Real Estate Management & Development | Sweden

Heba Fastighets AB

Strong residential assets, low financial risk

- Significant housing shortage in Sweden should continue to drive demand
- Conservative leverage and strategy are supportive to the credit profile
- Handelsbanken has a mandate to issue bonds for Heba

High demand for attractive rental apartments

Heba Fastighets AB (Heba) primarily owns and manages residential rental properties in the greater Stockholm area. Heba's properties are typically located in Stockholm's suburbs, with good transportation links and proximity to the city centre. We view Heba's property portfolio, which continuously is being modernised and expanded, as strong. We believe that the significant rental housing shortage in Sweden, and particularly in Stockholm, is unlikely to disappear in the foreseeable future, thereby buoying demand.

Modest leverage, controlled growth

Heba has a long track record of controlled, conservative growth while retaining moderate leverage. While we believe its loan-to-value (LTV) could increase slightly from the current 41%, we argue that Heba has one of the stronger balance sheets among Swedish real estate issuers. Heba's strong credit profile has been confirmed through its public rating of A- from Nordic Credit Rating.

SEK-denominated senior unsecured notes considered

Heba is contemplating issuing a senior unsecured green bond with an estimated size of SEK 1bn and a three- to seven-year maturity. Handelsbanken has a mandate to issue bonds for Heba and is a lender to the company.

Credit highlights

In our view, Heba's credit profile is supported by its strong property portfolio that primarily consists of attractive rental apartments in the greater Stockholm area, with a growing share of modern community service assets. In addition, we argue that Heba has one of the stronger balance sheets among Swedish real estate issuers, as well as a long track record of controlled growth and stable ownership. We acknowledge the company's small size and limited geographical diversification, but we find that these are relatively minor drawbacks compared with its strengths.

Key credit considerations

Supportive factors for Heba's credit profile - our view

We argue that Heba has an attractive property portfolio and a long track record of controlled growth and modest leverage

- An attractive residential real estate portfolio in the greater Stockholm area, where demand for residential housing remains high
- A growing share of modern community service assets, including elderly care properties, group housing, and day-care facilities
- A long and solid track record of controlled growth while retaining modest leverage
- A strong balance sheet, including a modest loan-to-value of 41%
- Good access to liquidity and capital through banks and through debt and equity markets
- A stable ownership structure, controlled by descendants of the company's founders
- Credible sustainability targets covering environmental, social and governance issues

Restrictive factors for Heba's credit profile - our view

- The company is relatively small and has limited geographical diversification
- Exposure to changes in Swedish rental regulation legislation
- Rental income is to a large extent dependent on rental negotiations with tenant organisations
- Relatively high share of short-term debt, although we would expect this to be refinanced with longer-maturity debt ahead
- Increased share of development projects

We consider its small size and low diversification as restrictive factors

Company description

Heba Fastighets AB (Heba) is a listed Swedish real estate company that owns, manages and develops residential and community service properties, primarily in the greater Stockholm region. Its portfolio consists of 66 properties with a total of 3,178 apartments, as well as a growing share of community service facilities. As of December 31, 2020, the property portfolio is valued at about SEK 12bn. Descendants of the two founders (Karl Holmberg and Folke Ericsson) control the company through the majority of votes (A-shares).

Focus on Stockholm rental apartments

A well-known owner and manager of residential properties in Stockholm Heba was founded in 1952 and listed in 1994. The company is primarily focused on residential rental properties, with a growing share of modern community service properties, in the greater Stockholm area. Heba owns and manages 68 properties, of which six are community service properties; in total, it holds 3,372 rental apartments and 361 community service facilities. While continuously expanding its residential portfolio through acquisitions and development, Heba also aims to grow its share of community service properties (elderly care, group homes, care facilities) to a maximum of 20% of its total property portfolio in the coming years. We believe the shortage of rental housing in Stockholm, as well as urbanisation and demographic trends, should ensure high demand for both asset classes.

Figure 1: Property value distribution by type (2020)

Source: Company reports

Heba continuously modernises and expands its portfolio Heba's properties are located in relatively central suburbs with good access to public transportation. The majority of Heba's rental properties were built in the 1940s, 50s and 60s. Twenty-two percent of its rental properties were built in the last 10 years and 43% of its older assets have been refurbished to modern standards. Heba aims to expand, refurbish and modernise its portfolio in order to increase returns on the existing properties.

Heba also acquires and develops new properties, typically close to its current properties' locations. The Swedish rental regulation system makes it difficult for landlords to raise rents, thereby pressuring the return on investments in existing properties. However, for new-build apartments, production costs can be taken into account, allowing the landlord to demand a rent that is more similar to what an unregulated market would yield. As it is very difficult for landlords to differentiate rents independently of the location of the apartments, many rental apartments have historically been transformed into tenant-owned co-operative apartments. In

addition, construction of new rental housing has been low for many decades, leading to a significant shortage of affordable rental apartments.

Figure 2: Property portfolio distribution by geography (2020)

We find that Heba's properties are in attractive locations in the greater Stockholm area

Source: Company reports

Figure 3: Map of greater Stockholm and Heba's properties

Source: Company reports

Note: Dark blue represents residential apartments; light blue represents community service properties.

Heba's relatively small size is a minor offsetting factor to its credit strengths, in our view Heba is a relatively small player in the Stockholm residential segment, which is still dominated by municipality-owned property companies (Figure 4). Although company size is often considered in the credit markets, and by rating agencies, we do not view this as a substantially restrictive factor when considering Heba's credit profile. Given that we deem the locations of Heba's properties attractive, and given the modernisation of its portfolio alongside the controlled development of new attractive rental and community service properties, we believe that there is a very low risk of

vacancies and potential loss of rental income ahead. However, if the Swedish rental market were to be de-regulated, which we consider as a quite unlikely possibility, we believe that Heba would be able to charge significantly higher rents for most, or perhaps all, of its rental apartments.

Figure 4: Selected private and municipality-owned housing owners

Source: Company reports, Handelsbanken Capital Markets Note: Stockholmshem, Svenska Bostäder and Huge are municipality-owned.

Controlled development strategy should strengthen Heba's portfolio further

Heba has limited development risk, in our view. Ongoing refurbishment, readjustment and modernisation of the property portfolio is a key component of Heba's strategy in order to meet tenant demand and improve the attractiveness of the properties, thereby increasing the rental value and yields. Current investments amount to SEK 1.5bn. Heba's strategy is primarily to build, acquire and develop properties in areas where it already has a presence, although it has identified some municipalities as particularly appealing for an entry. During 2020, Heba acquired two development projects in Norrtälje and Österåker, north of Stockholm, as well as an elderly care property in Salem, south of Stockholm. Heba has also started a joint venture with Åke Sundvall Byggnads AB, primarily for the construction of tenant-owned co-operative apartments. The total development portfolio consists of around 20 projects (including planned starts), with a potential of about 1,600 apartments.

Source: Company reports

Heba is focused on improving and modernising the property portfolio

Investment

In addition to new construction and acquisitions, Heba continuously modernises and refurbishes its existing portfolio, typically resulting in capital expenditure of about SEK 200m per year. According to Heba, refurbished rental apartments usually allow for a rent increase of around 50%, which is normally accepted by tenants. We believe that Heba's growth and investment strategy is sound and controlled. In our view, it should improve the overall quality of the existing portfolio while raising rental income and operating margins ahead.

Sustainability integrated in company strategy

We find that sustainability, expressed through the environmental, social, governance and financial dimensions, is integrated in Heba's long-term strategy, property management and development practices. Heba has set several firm, measurable targets within each of these dimensions in order to grow in a sustainable and financially sound manner. In January 2021, Heba published its new green financing framework, under which green bonds and green loans will issued. Heba has a longterm goal of becoming climate-neutral by 2045. To reach this, it has set targets, including an aim to reduce its energy consumption in heating by 20% by 2028 (with 2018 as a baseline). As of December 31, 2020, Heba had already achieved a reduction of more than 10%, and it monitors its energy consumption in order to improve. Heba is achieving the reduction through refurbishing older properties, changing ventilation systems and improving insulation. In addition, it is making investments in renewable energy, such as geothermal plants in combination with solar panels, and Heba requires its new-build properties to qualify for a Miljöbyggnad Silver rating or similar. We believe that Heba's focus on sustainable growth is credible, and its green financing framework, as well as the contemplated green bond issuance, should sharpen this further.

Stable ownership structure

Heba was listed in 1994, but the company continues to be controlled by descendants of the two founders (Karl Holmberg and Folke Eriksson) who control the majority of votes through A-shares. The investment company Carlbergssjön, which we view as a long-term owner, is the largest owner in terms of capital, and it has gradually increased its stake of B-shares. We believe that the ownership structure is credit-supportive and that it should remain stable, as it has been for decades, and we attribute Heba's historically low risk appetite and steady performance to this structure.

Table 2: Heba's ownership structure

	A-shares	B-shares	Capital	Votes

Note: As of January 31, 2021

Heba has set several measurable ESG targets

Descendants and family members of the founders remain in control of the company

Demand for rental apartments should remain high

Rents in Sweden are usually determined through negotiations between landlords and tenant representatives; there is no role in the proceedings for public stakeholders, such as the central government or municipalities. The negotiation system is reinforced by national consumer protection for private tenants. Generally, higher property prices and long queues for municipality-owned accommodation have resulted in strong demand for rental units, a trend we believe is likely to be sustained ahead. High Stockholm land prices and municipalities' monopoly on city planning are likely to continue to dampen the pace of new developments, in our view, implying that the housing deficit should persist for some time yet before demand and supply become balanced.

Significant rental housing shortage in a regulated market

The negotiation system is regulated, with roots in the 1950s Sweden's system of setting rents is based on negotiations between tenants and landlords. It was developed in the 1950s. 'Landlords' initially comprised only community housing corporations, but private landlords were included in the 1970s. The landlord is sometimes represented by a property-owners' organisation. Tenants are generally represented in the negotiations by a tenant organisation that has been assigned to protect the interests of the tenants. The negotiation system is regulated by the Rent Negotiation Act, which identifies the requirements of the different parties.

Partly owing to regulations, housing construction has remained low since the economic and real estate crisis in the early 1990s. At the same time, housing demand has risen sharply thanks to significant population growth in the last 20 years. In addition, construction of new housing has been tilted towards tenant-owned cooperative apartments, as returns are higher compared with rental apartments. Since 2018, more construction and real estate companies are now focusing on construction of rental apartments in the wake of tighter amortisation rules lowering demand for new tenant-owned co-operative apartments.

Figure 5: Housing units completed vs. population growth, Sweden

Housing construction has lagged population growth since the mid-1990s

Source: Statistics Sweden (SCB), Handelsbanken Capital Markets

Figure 6: Housing units completed vs. population growth, Stockholm

Housing shortage larger in Stockholm than rest of Sweden People moving to Stockholm, or any other part of Sweden, face two main housing options: buy or rent. Housing can be bought, as it can in many parts of the world, through a real estate agent, or privately by mutual agreement using a binding contract that stipulates price and specifies terms. Housing prices have risen sharply over recent years, making the option more expensive than it once was. As many rental apartment properties have been transformed and sold, thereby becoming tenant-owned co-operatives, the share of rental apartments in Stockholm has fallen sharply in the last 30 years, which has increased demand for affordable rental apartments even further.

Figure 7: Breakdown of housing by type in Stockholm

Source: Statistics Sweden (SCB), Handelsbanken Capital Markets

Substantial drop in rental apartments as a share of total housing in Stockholm One option in the Stockholm region is to rent through the Stockholm Housing Agency, or Bostadsförmedlingen, which is a housing agency publically owned by the city of Stockholm (Heba's apartments are part of the agency's offering). The process starts with the applicant registering in a queue. Applicants in the queue are offered apartments as they become available. According to Bostadsförmedlingen, it delivers new housing to 12,000 applicants per year. However, the queuing time is generally very long. In 2020, the average waiting time for a rental apartment was about 10 years, with more than 700,000 people in the housing queue.

housing queue

people in

Figure 8: Number of people in Stockholm's rental apartment queue

Source: Stockholm Housing Agency, Handelsbanken Capital Markets

Figure 9: Average waiting time, rental apartments, Stockholm

Source: Stockholm Housing Agency, Handelsbanken Capital Markets

In our view, the strong demand for rental apartments in Sweden partly stems from the rent regulations implemented in the 1950s, as regulation has resulted in rents falling substantially below what we deem to be market rents. With new regulations for the tenant-owned co-operative market recently introduced (minimum amortisation requirements and stricter income multiples), we expect the relative attractiveness of rental apartments in good geographical areas to increase relative to purchasing/ownership.

In September, the Swedish Board of Housing, Building and Planning (Boverket) presented a report with new housing shortage calculations, with the aim of studying how many households have an inadequate housing standard. According to the report, in 2018 there were 462,000 households that were overcrowded, 56,000 of which had stretched housing finances. The proportion of overcrowded households was highest in Stockholm county. If we look at housing construction in relation to population growth in each county, the major cities are where construction has been low since the 1990s.

Average waiting time to rent an apartment in Stockholm is 10 years

More than 60,000 new housing units needed yearly to meet demand

While construction of rental apartments has remained fairly stable in recent years, partly fuelled by government investment, the building of tenant-owned co-operative apartments has fallen by about half since 2017. Boverket estimates there were around 54,000 housing unit starts (rentals, co-ops and houses) in Sweden in 2020, of which 11,000 were in Stockholm. For Stockholm, this is lower than in recent years (14,000-16,000), which we partly attribute to uncertainty in the wake of the COVID-19 pandemic. Boverket has calculated that 592,000-664,000 housing units need to be built in Sweden in the next 10 years in order to meet demand. This translates into 59,000-66,000 units per year, the majority of which would need to be in Sweden's larger cities. Despite the high demand, Boverket expects housing construction to be lower in 2021 vs. 2020.

Figure 10: Housing starts by type, Sweden

Housing starts have fallen, partly owing to pandemic-related uncertainty

Given a rapidly growing population, general urbanisation trends and the number of households growing faster than completed units, we find that rental demand in Stockholm is high. Heba's prime areas are attractive, in our view, given their location (typically, relatively close to Stockholm city centre). Therefore, we believe the company can comfortably increase the number of apartments in its portfolio without incurring an increase in vacancies, given the strength of demand, lack of rental units and long queue for rental accommodation. The company's historical average vacancy rate is very low, basically only affected by people being evacuated during renovations.

Source: Statistics Sweden, Boverket, Handelsbanken Capital Markets

Stable credit quality in the real estate sector

Generally, we find that Swedish real estate companies presented solid credit metrics and sufficient liquidity throughout 2020. While some uncertainty remains owing to the ongoing pandemic, we view the downside risk to credit quality as limited. Moreover, we believe that the Riksbank's bond purchasing programme limits upside risk to credit spreads. To date, the negative economic effects from the pandemic have been primarily borne by companies with activities linked to restaurants, hotels and retail. While we acknowledge that real estate companies are exposed to these segments to various degrees, that is not enough to alter our stable overall view of the sector. In our view, the vast majority of credit ratings remain stable and credit metrics are well within the demands of rating agencies. We expect the trend towards more public ratings in the sector to continue.

The primary credit metric, loan-to-value, remains stable

Loan-to-value (LTV), a highly watched credit metric, has steadily been falling over the past ten years in Sweden, which we primarily attribute to lower interest rates (and consequently lower property yields) boosting property values. The largest rises in property values in Sweden have occurred in bigger metropolitan areas; however, most geographical areas (and sub-sectors) in Sweden have enjoyed the benefits of falling interest rates. In recent years, rising rents have increasingly contributed to strong growth in property values. During 2020, rents and property yields remained broadly stable, which we believe should persist heading into 2021.

After analysing changes in property values in Sweden during 2020, it is quite clear that the negative impacts that may have been feared in March, at the outset of the COVID-19 pandemic, did not materialise. To date, the only writedowns recorded relate to sectors directly affected by the pandemic, such as hotels, restaurants and retail. Office property values have typically been stable, whereas the values of residential and community services properties are rising. For Heba, which is primarily a residential player with a low LTV of 41%, we deem the risk of falling property values as quite low.

Figure 11: Average adjusted LTV (total debt-to-total assets)

We expect LTVs to remain stable going into 2021

Humlegården, Kungsleden, Vacse, Vasakronan, Wallenstam and Wihlborgs

Vacancy rates remain low, but are rising slowly

On September 30, 2020, the average vacancy rate (including project and development properties) had increased by 0.8% from December 30, 2019. While vacancy rates remain relatively low in Sweden, they are increasing owing to the economic impacts of the pandemic and behavioural changes within the retail and office sectors. We believe real estate companies will have to focus even more on tenant demand; vacancies could differ significantly between attractive and less attractive properties, thereby affecting rents and valuations. However, for residential apartments, we believe that vacancies will remain quite low, as they are not impacted by these trends in the same ways.

Figure 13: Average vacancy rates

Source: Handelsbanken Capital Markets

Note: Companies included are Atrium Ljungberg. Balder, Castellum, Fabege, Fastpartner, Hufvudstaden, Humlegården, Kungsleden, Vacse, Vasakronan, Wallenstam and Wihlborgs

Market funding continues to grow in a crowded SEK market

We expect real estate issuers' share of market funding to continue to rise. The proportion of secured debt (typically bank debt) relative to total assets is currently below 20%. We do not expect an increasing number of real estate companies to tap bond markets. The number of public ratings is also increasing rapidly: more than 80% of bonds issued by real estate companies are from rated issuers, a figure we believe will continue to rise ahead.

As Nordic and global capital markets are swamped with liquidity and as central banks (including the Riksbank) are buying bonds, we expect the trend to continue. In our view, the Swedish bond market is starting to become crowded; during H2 2020, the share of real estate issuers in the SEK market grew to around 60%, which negatively affected credit spreads compared with other sectors.

Figure 14: Average secured debt-to-total assets

Share of market funding continued to grow at the expense of bank debt, we believe

Note: Companies included are Atrium Ljungberg. Balder, Castellum, Fabege, Fastpartner, Hufvudstaden, Humlegården, Kungsleden, Vacse, Vasakronan, Wallenstam and Wihlborgs

Higher unemployment on the cards, but interest rates likely to remain low

Handelsbanken's macroeconomists expect the Swedish economy to rebound in 2021, and fears of a large recession have eased. However, unemployment is expected to rise, which could have an impact on the commercial property market. While it remains quite difficult to assess the economic outlook, we believe that demand for Heba's residential and real estate assets should be unaffected. While the economic outlook remains somewhat clouded, the view on Swedish and global interest rates (i.e. rates will remain very low) remains firm. Low interest rates have been, and will likely remain, positive for the real estate sector. The 'yield gap' (Figure 15: the difference between long/typically government interest rates and property yields) is at its highest yet; in our view, this should result in continued investor interest in Swedish real estate assets. We also believe international interest in Swedish real estate properties will continue to increase, as the country is deemed to be more stable, politically and economically, than others in Europe.

Slower economic environment offset by stimulus and low interest rates

Source: Handelsbanken Capital Markets

Figure 15: Property yield gap

Source: Handelsbanken Capital Markets

Financial policy and funding

In our view, Heba has a long track record of generating stable results while retaining a strong balance sheet, solid credit metrics and moderate leverage. We find that its reported LTV of 41% is among the lowest within the broader Swedish real estate sector. Even though we expect Heba's leverage to increase somewhat as its pace of acquisitions and development accelerates, we believe that its overall financial risk should remain low. We find that Heba's relatively strong A- rating, assigned by Nordic Credit Rating in May 2020, provides further support to its credit profile.

Financial policy

We consider Heba's leverage targets as conservative We expect Heba to continue to grow its rental income at a steady controlled pace while retaining and improving its operating margins. We also expect Heba to retain moderate leverage, albeit slightly higher than 40% owing to an increased pace of controlled development and acquisitions.

Heba's financial, operational and environmental targets include:

- An equity ratio of more than 40% (48% reported as of end-2020);
- LTV of less than 50%;
- A dividend payout ratio of 70%;
- A maximum of 20% community service properties in its portfolio;
- A 20% reduction of energy consumption by 2028; and,
- Climate-neutrality by 2045.

Moreover, Heba has measurable goals for customer and employee satisfaction and an increasing number of sustainability goals.

Heba has demonstrated steady rental income growth in recent years. Through expansion, modernisation and refurbishment of the portfolio, the company has also gradually increased its operating margins.

Figure 16: Heba's rental income and EBITDA margin

Source: Company reports

In our view, its credit metrics have remained strong, including LTV of 30-40%, one of the stronger figures within the broader Swedish real estate market.

Handelsbanken Capital Markets

Controlled growth

operating margins

and improvement of

Source: Company reports

Increasing share of unsecured funding

Heba has historically relied on banks for its funding. Looking ahead, Heba is contemplating to increase its share of market funding by issuing bonds under its recently published MTN programme, in addition to its existing commercial paper programme. As of December 31, 2020, interest-bearing debt amounted to SEK 4,915m, of which SEK 1,600m was related to commercial paper. In order to reduce the interest-rate risk, Heba has entered into interest rate swaps at a value of SEK 1,650m. The average interest rate was 1.15% at the end of 2020, the average debt maturity stood at 4.0 years, and the average interest fixing at 3.4 years.

Heba has upcoming maturities of SEK 2,000m (including SEK 800m in commercial paper) in the coming 12 months, some of which would be refinanced through the contemplated bond issuances. We view Heba's liquidity profile as adequate, with sufficient credit and overdraft facilities to cover upcoming commercial paper maturities, in case of market disruptions.

Figure 18: Debt maturity schedule, Q4 2020

Source: Company reports

The share of unsecured debt will likely increase, we believe

Credit view

In our view, Heba has one of the stronger credit profiles within the Swedish real estate sector. With a portfolio of attractive residential rental and community service properties, combined with modest leverage, stable ownership structure and a long track record of controlled growth, we find that Heba's credit profile compares favourably even with a broader Nordic real estate peer group. We acknowledge the company's small size and limited geographical diversification, as well as its relatively short debt maturity profile, as offsetting factors, but we find that these are relatively minor drawbacks compared with its strengths.

Supportive factors for Heba's credit profile - our view

- An attractive residential real estate portfolio in the greater Stockholm area, where demand for residential housing remains high
- A growing share of modern community service assets, including elderly care properties, group housing, and day-care facilities
- A long and solid track record of controlled growth while retaining modest leverage
- A strong balance sheet, including a modest loan-to-value of 41%
- · Good access to liquidity and capital through banks and through debt and equity markets
- A stable ownership structure, controlled by descendants of the company's founders
- Credible sustainability targets covering environmental, social and governance issues

Restrictive factors for Heba's credit profile - our view

- The company is relatively small and has limited geographical diversification
- Exposure to changes in Swedish rental regulation legislation
- Rental income is to a large extent dependent on rental negotiations with tenant organisations
- Relatively high share of short-term debt, although we would expect this to be refinanced with longer-maturity debt ahead
- · Increased share of development projects

We believe that Heba's strategy of continuously modernising and expanding its already strong property portfolio should strengthen its overall credit profile. Moreover, we are encouraged to see that the environmental, social, governance and financial dimensions of sustainability are embedded in Heba's strategy and its operational and financial targets.

Peer group analysis and rating considerations

Heba was assigned an A- rating by Nordic Credit Rating in May 2020. We believe that Heba's A- rating compares well with other highly rated Swedish real estate peers. We acknowledge that Heba differs from those peers owing to its smaller size, but we argue that is offset by its strong financial risk profile.

We argue that Heba has an attractive property portfolio and a long track record of controlled growth and modest leverage

We consider its small size and low diversification as restrictive factors

in our view

Modernisation and

should strengthen

the credit further,

portfolio investment

Table 3: Selected credit metrics for Nordic real estate peers, Q4 2020

Source: Company reports, Handelsbanken Capital Markets.

We note that most rating agencies view residential real estate assets favourably, particularly Swedish regulated rental assets. S&P typically scores residential assets "Strong/A", and Moody's refers to the regulated Swedish residential sector as "one of the strongest asset classes in Europe". We believe that investor sentiment towards well-managed residential real estate assets is similar.

At present, there are 42 publicly rated real estate companies (including governmentand municipality-related issuers) in the Nordics, most of which are in Sweden (37). Currently, only 9% have speculative-grade composite ratings (in the case of split ratings, the lower rating applies). If we exclude the 13 government-related issuers (which typically enjoy rating support from the rating agencies), we note that there are only three, or 10% of these issuers, that are rated in the A-category (Figure 19). We argue that Heba being one of few A-category rated real estate issuers in the Nordics is supportive to our view that Heba is a strong credit. The rating outlooks are overwhelmingly stable, with negative outlooks only attached to property companies that have high exposure to retail (Figure 21).

Credit marketing communication disclaimer

This marketing communication has not been prepared in accordance with legal requirements designed to promote the independence of investment research, and it is not subject to any prohibition on dealing ahead of the dissemination of investment research.

This marketing communication is commissioned and paid for by the corporate issuer to promote a new issuance by the company and is made available at the same time to any investment firms wishing to receive it. This report is deemed to constitute an acceptable minor non-monetary benefit in accordance with Directive 2014/65/EU of the European Parliament and of the Council of 15 May 2014 on markets in financial instruments ("MiFID II") and the Commission Delegated Directive (EU) 2017/593 of 7 April 2016 supplementing MiFID II.

Unless otherwise specified, prices and spreads mentioned in this report refer to the closing price of the previous day.

Risk warning

All investments involve risks and investors are encouraged to make their own decision as to the appropriateness of an investment in any securities referred to in this report, based on their specific investment objectives, financial status and risk tolerance. The historical return of a financial instrument is not a guarantee of future return. The value of financial instruments can rise or fall, and it is not certain that you will get back all the capital you have invested. At times, the expected total returns may fall outside of the above stated expectation because of price movement and/or volatility. Such interim deviations from specified expectations will be permitted but will become subject to review by Research Management.

Valuation and methodology

Projections, forecasts or estimates are based on one or more methods of valuation, such as cash flow analysis, recovery assignments, sector performance, market movements, etc. Projections, forecasts or estimates reflect the analyst's assessment of the expected total return on the instrument compared to the relevant benchmark (i.e. the expected return on a relevant benchmark with regard to similar credit quality, sector, currency, maturity, seniority, documentation, etc.). This assessment is not based on a proprietary HCM model and the basis for the analyst's assessment is dependent on the characteristics of the sector and the company and a multitude of fundamental and timing factors are incorporated. For more detailed information about the valuation and methodology please consult the Handelsbanken Capital Markets website: https://www.researchonline.se/desc/creditdisclosure.

Important Disclaimers

Handelsbanken Capital Markets, a division of Svenska Handelsbanken AB (publ) (collectively referred to herein as 'SHB') is regulated in Sweden by the Swedish Financial Supervisory Authority, in Norway by the Financial Supervisory Authority of Norway, in Finland by the Financial Supervisory of Finland and in Denmark by the Danish Financial Supervisory Authority.

In no event will SHB or any of its affiliates, their officers, directors or employees be liable to any person for any direct, indirect, special or consequential damages arising out of any use of the information contained in this marketing material, including without limitation any lost profits even if SHB is expressly advised of the possibility or likelihood of such damages.

The views contained in this marketing material are the opinions of employees of SHB and its affiliates and accurately reflect the personal views of the respective author at this date and are subject to change. There can be no assurance that future events will be consistent with any such opinions.

The information in this marketing material does not constitute a personal recommendation or personalised investment advice and such reports or opinions should not be the basis for making investment or strategic decisions. This document does not constitute or form part of any offer for sale or subscription of or solicitation of any offer to buy or subscribe for any securities nor shall it or any part of it form the basis of or be relied on in connection with any contract or commitment whatsoever. Past performance may not be repeated and should not be seen as an indication of future performance. The value of investments and the income from them may go down as well as up and investors may forfeit all principal originally invested. Investors are not guaranteed to make profits on investments and may lose money. Exchange rates may cause the value of overseas investments and the income arising from them to rise or fall.

No part of this marketing material may be reproduced or distributed to any other person without the prior written consent of SHB. The distribution of this document in certain jurisdictions may be restricted by law and persons into whose possession this document comes should inform themselves about, and observe, any such restrictions. SHB employees receive compensation that is generated by overall firm profitability.

Please be advised of the following important disclosure statements:

SHB employees receive compensation that is generated by overall firm profitability. Analyst compensation is not based on specific corporate finance or debt capital markets services. No part of analysts' compensation has been, is or will be directly or indirectly related to specific recommendations or views expressed within research reports.

From time to time, SHB and/or its affiliates may provide investment banking and other services, including corporate banking services and securities advice, to any of the companies mentioned in this marketing material. We may act as adviser and/or broker to any of the companies mentioned in this marketing material. SHB may also seek corporate finance assignments with such companies.

We buy and sell securities mentioned in this marketing material from customers on a principal basis. Accordingly, we may at any time have a long or short position in any such securities. We may also make a market in the securities of all the companies mentioned in this marketing material.

SHB, its affiliates, their clients, officers, directors or employees may own or have positions in securities mentioned in this marketing material.

In conjunction with services relating to financial instruments, the Bank may, under certain circumstances, pay or receive inducements, i.e. fees and commission from parties other than the customer. Inducements may be both monetary and non-monetary benefits. If inducements are paid to or received from a third party, it is required that the payment must aim to improve the quality of the service, and the payment must not prevent the Bank from safeguarding the customer's interests. The customer must be informed about such

remuneration that the Bank receives. When the Bank provides investment recommendations, the Bank receives minor non-monetary benefits. Minor non-monetary benefits consist of the following:

- Information or documentation about a financial instrument or an investment service that is general in character.
- Written material produced by a third party that is an issuer to market a new issue.
- Participation at conferences and seminars regarding a specific instrument or investment service
- Corporate hospitality up to a reasonable amount.

As part of its control of conflicts of interests, the Bank has introduced restrictions ("Information barriers") on communications between the Research department and other departments of the Bank. In addition, in the Bank's organisational structure, the Research department is kept separate from the Corporate Finance department and other departments with similar remits. The Guidelines concerning Research also include regulations for how payments, bonuses and salaries may be paid out to analysts, what marketing activities an analyst may participate in, how analysts are to handle their own securities transactions and those of closely related persons, etc. In addition, there are restrictions in communications between analysts and the subject company. According to the Bank's Ethical Guidelines for the Handelsbanken Group, the board and all employees of the Bank must observe high standards of ethics in carrying out their responsibilities at the Bank, as well as other assignments. For full information on the Bank's ethical guidelines please see the Bank's website www.handelsbanken.com and click through to About the Group – Policy documents and guidelines – Policy on Bribery and Corruption. The prohibition against bribery also includes the soliciting, arranging or accepting bribes intended for the employee's family, friends, associates or acquaintances.
